CPTRAX

Real-time insider and external threat intelligence for the Windows® Enterprise.

Do you have a monitoring strategy for Windows® File Systems, Active Directory, GPO and User Authentications? Are you needing to protect and safeguard your enterprise to avoid disruptions, gather security actions for historical analysis or to ensure security protocols are being closely followed? Despite best efforts to secure your enterprise, rogue characters can appear. Visual Click's CPTRAX helps you by providing proactive monitoring, alerting and remediation.

Whether on-premise, air-gapped, cloud, virtualized or any combination thereof, CPTRAX provides a scalable real-time solution. Implementation can start with a single department, add-on as needed to include your entire Windows® security estate.

Further assisting with your security profile management, CPTRAX's modularized approach allows you to choose the security platforms to monitor, alert and remediate. Modules include Windows® File Systems, Active Directory, GPO, Logon Authentications and workstation removable device monitoring and control to contain and prevent data leakage.

Assisting your data access governance, CPTRAX provides customizable Security Profiles enabling directed alerting and remediations. Both point and pattern alerting enable a variety of abilities that can be tailored by your security teams. Examples include Logon authentications incidents and response can be directed to your infrastructure team; Active Directory User Lockouts can be directed to your helpdesk team; Improper File System actions can be remediated with automated PowerShell script(s). Changes to any GPO's baseline are detailed as each occur.

Highlights

• CPTRAX forensics is provided by numerous pre-built reports, both graphical and detailed, each are easily customizable, schedulable and can be delivered via file system and email as directed.

• CPTRAX includes the following components, server agent, desktop agents, back-end reporting including optional SQL Server storage for historical reporting. Fully deployable on-premise, air-gapped and cloud environments for helping secure your Windows® File System, Active Directory, GPO and Authentications.

• CPTRAX, via support for syslog and PowerShell scripts, easily integrates with your other third-party security and incident management products.

• CPTRAX helps organizations of all sizes address risk and regulatory exposure by providing compliance reporting for NIST, CJIS, SOX, HIPAA, PCI DSS and more.

• Visual Click Software's CPTRAX product is designed to be part of a comprehensive security approach.
